## Mykonos Software Opens Headquarters in San Francisco and Accelerates Hiring

New Office to Include Web Security Research and Development Team

SAN FRANCISCO, Jan 17, 2012 (BUSINESS WIRE) -- Mykonos Software, the leading provider of Web Intrusion Prevention Systems (WIPS), today announced that it has moved its headquarters to San Francisco.

The company, which recently won a 2011 Technology Innovation award from The Wall Street Journal in the information security category, has opened the new office at 370 Brannan Street, San Francisco, Calif. 94107.

The new headquarters is situated in the heart of San Francisco to gain access to the talented local workforce. Mykonos seeks to expand its security team and hire white hat hackers and hard core coders to work in research and development, creating new security features and products to help enterprises protect their websites from fraud and theft.

"Mykonos is excited to call San Francisco home, and take advantage of the incredible technology expertise of the San Francisco workforce," said David Koretz, president and CEO of Mykonos Software. "We are looking for smart hackers who want to build the most innovative security products in the world."

The Mykonos Web Security product uses deception to detect, confuse, slow down, and prevent attackers in real-time -- helping to keep Websites safe. The company also has offices in New York City and Rochester, New York.

Mykonos Software was recently named a finalist for Rookie Security Company of the Year by SC Magazine.

Click to Tweet @MykonosSoftware opens new office in San Francisco. Hiring will expand Web #security R&D team.

About Mykonos Software

Mykonos is the smartest way to secure Websites and Web applications against hackers, fraud and theft. Its Web Intrusion Prevention System uses deception to detect, track, profile and prevent hackers in real-time. Unlike legacy signature-based approaches, Mykonos is the first technology that inserts thousands of detection points to proactively identify attackers before they do damage -- without any false positives. Mykonos goes beyond the IP address to track the individual attacker, profile their behavior and deploy counter measures. With the Mykonos Web Security, administrators are liberated from writing rules, analyzing massive log files or monitoring another console. Mykonos neutralizes threats as they occur preventing the loss of data and saving companies millions of dollars from fraud or lost revenue.
