

Mykonos Software Opens New Research and Development Office in Rochester, New York

BURLINGAME, Calif.– August 30 , 2011 – [Mykonos Software Inc.](#), the creator of the first Web Application Firewall with a Web Intrusion Prevention System (WIPS) that secures Web sites and Web applications against fraud and theft, today announced the opening of a new Research and Development office in Rochester, New York.

The company, which recently launched a new release of its flagship product, the Mykonos Security Appliance, is opening the new office at 4 Commercial Street, Suite 101, Rochester, New York 14614.

The Mykonos Research and Development office will focus on expanding its research into proactive cyber security methodologies and deception based techniques, as well as the development and engineering of next generation features and products to add to its current award winning solution.

“Rochester is a very strategic location for Mykonos Software, enabling us to gain access to a well-educated talent pool and one of the top computing schools in the country – the Rochester Institute of Technology,” said David Koretz, president and CEO. “As Mykonos continues grow, we will look to deepen our relationship with RIT and the community to enhance our world-class cyber security research and development team.”

Mykonos Software was named by Gartner as a ‘Cool Vendor’ in Application Security in 2010 and won the SC Magazine award for “Most Innovative Security Company” at the SCWorld Congress.

About Mykonos Software

Mykonos is the smartest way to secure Web sites and Web applications against hackers, fraud and theft. Its next generation Web Application Firewall (WAF) with a Web Intrusion Prevention System (WIPS) detects, tags, tracks and prevents hackers in real-time. Unlike legacy signature-based approaches, Mykonos is the first technology that inserts thousands of detection points to proactively identify attackers before they do damage – without any false positives. Mykonos goes beyond the IP address to track the individual attacker, profile their behavior and deploy counter measures. With the Mykonos Security Appliance, administrators are liberated from writing rules, analyzing massive log files or monitoring another console. Mykonos neutralizes threats as they occur preventing the loss of data and saving companies millions of dollars from fraud or lost revenue.
