## Mykonos Security Appliance

The Mykonos Security Appliance gives system administrators and security staff a real-time view of hackers as they infiltrate Web applications. It profiles hackers in real-time, ascertaining their location, skill level and other critical data, while enabling IT staff to instantly deploy counter-measures.

The Mykonos Security Appliance is targeted at financial services and insurance companies, healthcare companies, e-commerce companies, government entities, and other high profile targets of Web-based hacking attempts.
